The Information Technology Cost Management course is suited to IT people placed in the role as IT cost manager who have been performing the role for some time but have never received any formal training.

The course is also suitable as an introduction for anyone thinking about IT cost analysis role or for other cost management professionals with focus on IT investment and operation, and wanting to gain a more in-depth understanding of the role and responsibilities in the area of cost management.

This 'Fundamentals' course is aimed at learning real-world IT cost analysis and IT budget development and implementation skills that can be used in the workplace especially in an organization with high IT investment.

Course delegates or course participants ;should be able to return to their working environments and work as effective Cost Management team members immediately adding value and building effective relationships with business and IT stakeholders.

The course uses case studies to analyze approaches to managerial cost investment and operation (capex and opex) The course also covers the application of decision and control models, planning and control in IT cost management, while also concern on decision control models, and cost planning.

This course will deliver in Indonesian and/or English by Our Master Trainer: Fauzi Hasan, DR, Ir. MM, MBA, PMP, CISA, CISSP, SSCP, CISM, CMPP, CGeIT, APICS.

Objectives& Benefits

By the end of the IT Cost Management the participants will be able to:

- To have thorough understanding on the IT cost management including all the parameters and issues related
- To have complete perspective on IT Investment Management Process
- Work with business users (stake holders) to define different types of IT cost investment and operation
- A framework to calculate Total Cost of Ownership (TCO) for IT enterprise resource systems
- To have capability to break-down complex IT cost scenarios or cost problems into process and data models (cost management related)
- To Have capability in implementing modern cost management concept as related to IT infrastructure
- To have capability to reduce and optimize IT cost as related to the investment, operation and maintenance of IT installation and the infrastructure

Target Audience

This course was originally designed for IT managers and those who involve in the activities such as related to IT investment, operation and maintenance. However, the course is also suitable for experienced IT managers and Investment Analysts as it:

- Provides a reinforcement session for those IT staff who have been doing the job for many years but have never received formal training in IT cost management
- Provides a 'standard' approach to be adopted by teams who might currently be using a mix of different techniques in IT cost management.

Course Contents and Descriptions
